Babylon Tower

Babylon tower is a famous ancient building, typical representative of one of many categories of resonant buildings, introduced by Nimrod. Although we could be aware of purpose, of some of categories of resonant buildings, because it is obviously, what still remains hidden is their unity based on common purpose, just because of missing explanation, which should be more accurately than Gods Will, as replacement of all missing reasons.

Significance of reasonable understanding the principles of unifying all Atlantis resonant buildings, which together with natural resonant geographies objects, represent a huge resonant global network, lays in benefits of implementing these principals in wide range of applications, in order to reach the most optimal results.

Let us just remember to some of resonant applications of Atlantis, along with their purpose, at least these, which had been implemented by Nimrod. Although buildings of Nimrod, Hettite leader, the son of Kush Kingdom, who unified Atlantis civilization upon inherited cultural treasures, could be of different purpose, the common properties of all these categories, are that resonant buildings represent resonant constructions, which aim is to focus and amplify telluric energy. The quality of this telluric energy is similar to the quality of sound and light, thus the resonant structure of buildings could produce the effect of focusing and amplifying of the focused energy beam. The physical properties of resonant buildings, determine the properties of filter and frequency bandwidth of resulted energy beam. If the measures of particular object harmonically match the measures of planet Earth, the oscillations within the resonant object are going to be supported by the planetary oscillations, matching an all-pervasive background field. In this way, universal energy distribution is going to be established, as well as universal communication channel, along the focused standing wave beam.

Upon of this matter of facts, all of Nimrods resonant buildings have had purpose of temples, but were also related to the freshwater springs. Amphitheatres have served for performing theater dramas. Labyrinths have been introduced to provide water springs at higher area, as well as to allow for irrigation of the fertile fields, supporting the food production and abundance of vegetation and life in general. The settlements have been built to match and resonantly amplify an energy beam, in which field the residence is very pleasant, since the life growth is supported within. Not only locations, but rather the shapes of buildings, and their roofs use to play important role in resulted field, along with shape of walls around the settlements. However, the most famous resonant building of Nimrod was a Babylon tower, being one of seven World Wonders of antic. The tower played the role of temple, but also of an irrigation system, accordingly to the reports about wonderful hanged gardens of Semiramis, they have been preserved until recently.

Of these reasons, we are informed about capabilities of resonant buildings such as towers, to pull up the ground water at higher altitudes, and to irrigate the fertile fields around the water flow downstream, significantly enlarging the surface of fertile fields to be watered, thus the food production at all.

Implementing of ancient irrigation system

Using an ancient idea, provided by actual knowledge about resonant landscape networking, as well as about Babylon tower, we could implement similar resonant buildings, not necessary of such a huge size and shape, in order to improve for irrigation in wide areas along the rivers and channels, and around the lakes, wherever the need for irrigation exists. The beneficial of such a system compared to modern irrigation systems, which consist of water pumps and pipes, lies in its longevity, depends on which material and strategy is going to be implemented. There are many possible kinds of resonant objects and shapes, which could be selected to match particular purpose, depends on location, available material, surrounded landscape, and needed capacity of water for irrigation purpose. In generally, smaller size of resonant hills are going to give smaller capacity of water then the bigger objects, but they are also going to pull the ground water up, and provide for better humidity in their surrounding, independently if the water springs are going to outbreak at their slopes or not. Building additional resonant objects on the top of the resonant hill, such as a tower surrounded with walls in form of concentric rings, is going to significantly improve for intensity of focused telluric energy field, thus to increase the chances for freshwater spring to outbreak near the resonant building walls.

Depends on existing landscape, for instance in presence of some natural or artificial hill, we could just increase an energy beam intensity, selecting appropriate kind and size of resonant building, or we have to build a hill, in case it is not existing already. Instead of the hill, another forms of resonant objects could be selected. In any case, planning the system optimally is going to disclose unnecessary high investment, and to bring the best results. The best way to select optimal resonant objects and their location could be achieved implementing the measurement of energy field at significant points on a model, as a true copy of the landscape, below which should be implemented a generator of standing waves of bright frequency range, such as Tesla transformer with spark gap.

In doing so, it would be possible to determine an optimal kind and size of resonant objects, along with their spatial locations, in order to achieve a highest intensity of electrical field, of their energy beams in their surroundings. An optimal measurement method should be determined, in order to get an accurate information, with an aim to avoid wrong choice to be made, thus to avoid the waist caused by wrong decision. The best way would be, however to 3D scan an area close over the landscape model, in order to get an accurate information about spatial energy distribution, visualizing the measurement results, in different scenarios of different kinds of resonant building models, in order to match the best combination, as well as to allow for optimal justifying on investment.

This would be also an optimal method for repairing an existing resonant landscape network allover the world, on overall benefits, such as:

- lowering an intensity and frequency of demolishing seismic activities,
- establishing an cycling of underground water, supporting the water flow upwards, toward the freshwater springs at higher areas, along the telluric energy beams of high intensity
- supporting an agricultural industry, by increasing surface of available fertile fields, along with reforesting of devastating landscapes, allowing abundance of life in general, and increasing the value of land simultaneously
- allowing for micro-climatic beneficial by reforesting a wide areas in optimal way, implementing an universal fractal model, thus contributing to the global climatic change in beneficial way, as well as to increasing an overall harmony

Only some predictable benefits are listed above, which could be all together enough, to represent a fundamental frame for further global development of overall benefits. The real estimation could not be made easily, because of leak of information as result of benefits, which would represent the base of further development.

This would be the foundation of real prosperity, in way described by famous inventor Nikola Tesla, who sad that the real prosperity will starts when the physics science merge meta-physics concept of the world inherited of our ancestors along the generations.

Instructions for building the resonant objects

Regardless which kind of resonant form is going to be selected, the common properties of all resonant forms are related to resonant properties of planet Earth, as gateway to whole universe. Thus, the shape of resonant forms as well as size play significant role in reaching an aim to intensify an existing telluric field. Bearing in mind the acoustic resonant properties of bells, tubes, spheres, cups, pyramids, cubes, among the others resonant objects, we could make proper selection of resonant shape, as well as of material for building our particular irrigation network. The smaller object, the higher resonant frequency of object, along with the energy beam formed within the resonant object, accordingly to its shape and size. In turn, the bigger object, the lower resonant frequency. In the matter of fact, depends on shape of resonator, the frequency band is going to be determined, just like in case of, for instance acoustic guitar resonant body, which band with is extended due to combination of bright and narrow parts of acoustic resonator.

Although the hills built of simple earth, would work such as resonant bells, an effect would be even amplified using the cover of hard material, placed under the last soil layer. Traditionally, applied covering could be build of simple clay sheets, such as it is plausible accordingly to example of Bosnian pyramids, at Visoko, near Sarajevo, which could be arranged in different ways to match resonant needs optimally. Along a time, the material of sheets is going to become harder, increasing its own density, accordingly to increasing an energy, caused by multiple reflection of its surface, just similar as it happens by a bell ringing, within a bell. The sheets must not be baked, only the clay should be prepared on such a way to avoid crack. Alternatively, the concrete sheets could be implemented. Some kind of binding the sheets among each other, is recommended to introduce in order to enlarge stability of the bell, so it could better ring. Depends on size of the resonant object, two or even three layers of the sheets could be introduced. The sheets in the next layer are placed in such a manner, to cover the joint lines of the first layer.

Another possibility to build the resonant objects could be, using a hard material such as stone, just like in case of pyramids at Giza, Egypt. The stairs shaped pyramids, or even spiral pathways around cup shape, would also amplified the telluric filed, providing even better focusing, thus higher intensity. Depends on size of selected resonant object, some resonant caves and solid bodies could be build within the buildings, along with tunnels, to even better match the needs of focusing an energy field, as well as related to pulling up a ground water to flow upwards.

Concerning the need to pull the ground water upwards, our resonant building should be filled mostly with some porous material, such as earth, to allow the water to flow upwards, along the focused standing wave beam. Furthermore, the measures of object should match the resonance of Earth. The best way to do this is to measure the profile line of the bell shape, from base till the top of the hill. The length should be ten based harmonic of Schumann resonant frequency of 7.83 Hz, thus in range of 7.5 till 8 Hz. Matching the quarter, the half, or the tree quarter of resonant frequency multiplied by some power of ten, would keep the resonant object in harmony with planet, thus with whole universe, accordingly to experiences and shared knowledge of many researchers, and inventors such as Nikola Tesla. It means, the length of line should amount 1.88 – 2 m, 3.75 – 4 m, 5.63 – 6 m, 7.5 – 8 m, 9.38 – 10 m, 11.25 – 12 m, 13.13 – 14 m, 15 – 16 m and so on. Another level of graduation could follow the same array, being just multiplied by 10. We should bear in mind that Schumann resonant frequency of planet Earth depends on season, thus in winter is lower, since the electricity went deeper into the ground, and consequently a distance to ionosphere increase. In summertime electricity is coming back to the surface, due to plants, which pull the water up, so the wet soil conductivity is increased, and the distance between the both conductive surfaces of planetary capacitor, thus the ground and ionosphere would also decrease, with

consequence that the resonant frequency is going to increase.

The height of an object also plays significant role, therefore should follow the same rule as in case of bell profile line length of the resonant hill. The resonant object could be built as multistage amplifier, consists of several, different stages, which all should follow the same rule, thus the steps between the next stages, in their own height or length should be of step length. An image below shows one possible example of resonant object, matched harmonically to the resonance of planet Earth.

The profile bell line length, as well as basic radius and step, thus height of an object, all match an integer multiple of a quarter of Schumann resonance in meters. There are several possibilities to examine an resonant building to match presented schema, such as solid object in shape of bell, or even cut at third stage, being as 12 m as high. The step area within would significantly increase an intensity of focused energy beam, regardless if the building is going to be covered with material to match a shape of bell or not. Furthermore, the basic shape of building could be square, circle or even polygon. The object could have a platform at the top above, but also a tower to match a next step and one more amplification stage. Inner stairway building could be made of any material, but the walls should be perforated and space between filled with some porous material, such as sand, mixed with an earth, grit and small stones, to allow the water to flow through it, also if soil mixture is dry. The walls could be build from the base up, but also the first step could be filled with material, then the next wall could be build, and so on. This building strategy would spare some material, for similar effect. In doing so, it would be advisable to use some kind of base for wall, such as concrete columns, of two meters long. In this particular case six such a columns should be placed along the circumference of circle base, regular distanced of each other. In doing so we are going to match a hexagram polygon, the shape related to the snowflake, as well as to the double vortex, and to get even better results of amplified focused telluric energy field, along with increased resonant building stability.

The total size of object could also be a half of this one presented on the schematic diagram above, matching the step to be of $a = 2 \text{ m}$, and height of 8 m, with extended column on the top above of 5.5 m length, and quarter of meter in diameter, so that it would be buried 1.5 m deep in the middle of the tower, being 4 m height.

In the middle of an object, the solid clay spherical object, of one, or even two meters in diameter could be placed, so that its center is going to be located slightly over the surface of a field. The surrounding of the sphere could be covered by a quarter of meter thick fine corn grit layer. The spherical body is going to play a role of resonant energy storage and amplifier, thus it is going to exciting the whole building, such as in case of bell, just in static application.

At the horizontal surfaces it would be possible to plant some ornamental plants, which are going to fill an area around the stair cup, to match the shape of bell. All plants would pull additionally the water up with their roots, contributing in this way to the total water flow.

Such a resonant building could even allow the water spring to outbreak at one third of its total height or even above, depends on level of ground water. In some particular cases, such as in case the location of the resonant building is nearby water channel, river, lake or the like, this would represent solution of longevity irrigation system. The water could be conducted toward the wished distanced fields, using some pipes and force of gravity. Depends on the water source capacity, and location, appropriate waterproof vessel, or even though the system of connected vessels, could be integrated in building, to keep the harmony, and to allow for easier water distribution.

Combining similar resonant objects to build the group, would significantly improve for intensities of energy field within any particular object, as well as the whole group of objects, thus for overall performance of the irrigation system. Although grouping the objects has an immense influence to the total results, a lot of different possibilities could be made, in order to optimally match arrangement depends on particular landscape and needs.

We should just bear in mind, that we would not need any additional energy, to pump water high, thus it would be of huge benefits for many agricultural communities, since such kind of the water pump doesn't need any, or very few maintenance, depends on circumstances and material used for building it.

For illustration, let us estimate how many water could we save in smallest of the resonant towers, shown at image above. Concerning that we succeeded to pull the water up until the first step of the resonant bell, at two meters height, and that we have built the waterproof tank at whole available surface around the ring of ten meters of middle diameter, two meters wide, and just as quarter of meter deep, we could collect approximately 15 tons of water within. Even though if we would use only part of available surface, the total amount of weight would still be several tons. This matter of fact has to be included in construction plan, in order to inshore the building for static last.

How the water flows upwards

Let us try to demystify due to increasing an understanding, the physical processes of flowing the water stream upwards, against the gravity force. How is it possible to allow the water to flow upwards underground? We could be aware of one another plausible physical process of flowing the water upwards against the gravity force, as for example by capillary conducting the water stream upwards, such in case of trees. This process seems to be clear to us, since it is scientific explained, and furthermore it is represented in chemistry labs exercising, as part of standard education. But how are we going to correlate this physical occurrence with Babylon tower, and its capability to pull up the ground water, to allow the water springs to outbreak at altitudes above the base of the tower. One more time to reiterate, the Babylon tower is just a symbol in this particular case, since we trying to understand and to implement some similar resonant objects and principles with an aim to enormously enlarge agricultural production, increasing justifying on investment due to spearing an energy needs, necessary for irrigation.

We could be aware of presence of numerous water springs, allover the world, correlated to the resonant capabilities of numerous kind of buildings, along with natural acoustic resonant objects such as hills, mountains, valleys, or the like. We have already mentioned numerous of correlations between the freshwater springs and resonant buildings in our former works, such as in [Art Landscape – Heritaghe of Atlantis](#) and [Castle-Hills – Crowns of the Hills](#). Just bear in mind the similarities among described resonant buildings with ringing bell. We could match correlation to the Joe's cell, the resonant form which consists of numerous metal cylinders of different diameters and heights, situated within each other axially symmetric, used for unexpectedly high increasing an efficiency of electrolytic water dissociation.

Furthermore, accordingly to the results of investigation of many researchers in this field, we could pull up in awareness that the water springs match the common center of double square or even though triangle based Fibonacci vortexes, such as in case of very good documented results of investigation of resonant capabilities of [Rtanj](#) mountain, in Serbia. The conclusions of these investigations, shared at the related link, are teaching us about significant resonant forms and their relation to the molecule of water. In hexagonal form of snowflake we could find the double vortexes of opposed directions, concerning that one triangle of the cultivated mountain peak of Rtanj, with an angle of 105 degrees, which corresponds to angle of valence boundaries between the atoms of hydrogen and oxygen, the constitutive particles of the molecule of water. Furthermore, being water molecule related, triangle based Fibonacci vortex, represents a bridge which bypass the micro and macro fractal level of energy imprinted within the fixed fractal frame of mater, merging in this way the underground water molecules with mountain peak shape.

On the other side, we have researchers and inventors such as John Searl, and Edward Leedsalnin, whose inventions based upon the Vaimanika Shastra, an ancient Indian knowledge base, about many kinds of flying vehicles, described in many details. In respect to Sir John Searl, let us mention his terminology correction, he has suggested and explained, replacing the term anti-gravity with inverse gravity field. The point is that the gravitational force is not neglected, applying the resonant devices, but rather temporarily inverted, in local environmental area, allowing the vehicle to levitate within.

As an acknowledgment of Searl effect, a report of scientific experiment upon [inverse gravity](#), has been published by Russian Academy of Science. The conclusion of accurately made measurement results, has revealed the principals of inverse gravity field, as cascade of axial symmetric concentric rings, which intensity is focused in the middle, and decrease in Gauss or bell-shape curve with the

distance of the center of device. The results of experiment have shown, that heavy equipment has reduced its weight along running, although only particular amplification of the field takes place.

Exactly the same shape of field is used in case of our irrigation system. The walls of concentric circles made resonant building, form the shape of telluric field, to exactly match the energy field to cause invert gravitational force underneath and within the resonant bell of the hill. Thus an inverted gravitational field causes the water to flow upwards, within an area of influence. The underground water is going to be pulled up in bell-shape form, following the shape of resonant object, and even though to outbreak high enough to can flow downstream along provided waterway to irrigate the distant fields.

Possible usage

The resonant hill object in form of flat bell with mast on the top above, has been very long term in use all over the world. Although the simple irrigation system has been used very long term in flatland areas, such as all over the Panyonian flatland, the ground of former Panyonian sea, due to the lack of knowledge, the system has stopped to be used, proclaimed to be superstitious, thus even has been of this reason removed. The water was not pulled up to outbreak at the hills slope, but rather, the level of the ground water has been pulled up closer to the field surface, in order to increase the humidity of an earth, providing support for the plants to grow. The efficiency of irrigating system could be adjusted, leveling the height of the mast, to avoid both excessive, as well as too low soil moisture. The flat, wide hill slopes of the resonant object could also be cultivated on agricultural purpose. The principal is simple expressed, the same as described in previous chapter in case of resonant tower, the bell-ringing principal.

I can remember my childhood, at late sixties of the last century, when I use to ride in a carriage, with my cousins, during the summer holiday, to reach the distant fields, at Banat flatland, north Serbia, that I've noticed such unusual applications, and have asked the cousins what for could it be. The resonant application has looked like a long mast without any flag, stabbed at the top of the wide, flat hill, in the middle of the desolate agricultural field, seemingly with no any sense possible to be reached. The cousin said to me that it is some strange old German irrigation system, which doesn't work plausible, and that the leveling of the masts height should affect the soil moisture, but however since this was not proved in practice, it seemed to be a kind of hokes-pokes. Later on, after the masts have been removed and hills have been leveled, thus the fields could be easier cultivated, the difference in soil moisture could be noticed. Although the difference of soil moisture was not remarkable, it was reported, after removing, that irrigation system has had effect, since along the hot summer months, slightly increasing of humidity could affect the harvest results significantly.

Accordingly to the famous brain storming methodology, or even better described in this particular case, accordingly to associative memory, we could pull up in our awareness the high level of similarity of this strange old German irrigation system with traditional description of Irminsul, preserved in German mythology. At this place, I'd like, one more time, to suggest the correction of traditional name, of Irminsul, to better match the traditional description, as In-mir-Sul, which means: the light column within myself. Just simple awareness about this, demystifies a lot of about the original place where the implementation of legendary symbol tuck place. The question, where is In-mir-Sul is plausible answered in this way. It is within us, since every single human being represents a wave guide, the focused radio wave of telluric origin, spread as a laser beam along the body, till the Core on one side, passing through all Heavens on the other side. In similar way, we have put the light on another ancient Hebrew implementation of Inmirsul as resonant irrigation

system. Just try to understand the meaning of Hebrew, thus Er-bräu on German language, one who brews vine or bear, thus one who is German ab-origin. Another plausible meaning of Hebrew is Hero, in Slavic languages Heroy, even though much closer to original term. In this way we could be aware of existing unity of Hebrews, German, Slavic, Roman, Arabic originate people, as well as all the others, especially native people, which are all together related to heritage of Atlantis, a global civilization, which is still present allover the world, regardless of racial, spatial, or traditional differences among them, since united together, an inherited treasures, which support unity, magnify in both way, in quantity but also in quality of information.

The principle of dividing to rule, due to providing the conflicts among different groups of people, could be related to the time before Romans, to ancestors of Theseus, who have demolished Babylon tower, accordingly to Biblical reports. If we remember that false hero Theseus has demolished another irrigation system of Minoan origin, the Labyrinth, which is obviously similar in many aspects with another resonant buildings of same architect, amphitheater, then we could be aware of replacement of freedom and unity build upon heritage of Atlantis, by disunity and slavery of Attica, introduced by Theseus. On the other hand, the architect of Babylon tower, has been exactly the same one, who has build all another resonant buildings, with similar capabilities and properties. The knowledge about this ancient technology is preserved all around the world, along with numerous evidences, in form of traditional implementation of agricultural food production, as well as building of resonant temples, and taking care about the resonant landscape network, as far as possible.

This is one more reason to believe that the names of Nimrod and Hebrew are one and the same. The etymology of the name is described in more details in my previous works, such as [Art Landscape – Heritage of Atlantis](#), and [Castle-Hills – Crowns of the Hills](#).

Furthermore, the message is clear: The freedom is holy and nobody can steal it. The true is holy and nobody can replace it with some cheep lies. Everything what is in harmony with Whole is holy. Consequently, the holy treasures inherited of our ancestors, are of common purpose, thus should not be neither proclaimed to be private property nor hidden of for instance being expert reasons, but rather shared and wide implemented, the more the better, in intention to increase an overall harmony, and support an abundance of life, love and peace.

Conclusion

We have described in this work principal of working of resonant ancient irrigation system, of unknown ages. All measures and sizes mentioned above are given on clarifying purpose, thus the real size of the resonant object should be determined to achieve the harmony with resonant landscape, considering particular local needs. Since the resonant frequency of any body depends on its shape and size, and our aim is to match the resonant case with the whole planet, as gateway to the whole universe, the shortest length amounts approximately the quarter of the meter, which would be equal to one span, an old measure of ancient times. Next measure is of half of meter, corresponds to one cubit, as well as one meter would correspond to one pace. Doubled pace equals two meters, since this length equals the quarter of eight, which equals the longitudinal resonant frequency of planet Earth, since Schumann resonance frequency amounts 7.83 thus 8 Hz. This is the main reason of keeping long time these measures till recently, since matching the resonant frequency of planet Earth had been an aim of ancient architects, to keep the universal harmony, and to get countless additional benefits.

All explained principals, should be proven due to build prototypes of the resonant buildings of relatively smaller sizes, in order to acquire additional knowledge accordingly to the experience, which could in turn be implemented worldwide, in wide range of applications, wherever need for improving the harmony exists. It would be recommended to share this information free, in order to prevent collapse of planetary system to be completed, since we are within the process of canceling the global life, unfortunately. In doing so, we're going to improve for efficiency of revealing the harmony worldwide, essential for supporting abundance of life to grow and spread allover the world and far beyond, across the Whole Universe.

Resonant landscape network system represents harmonic development of the natural resonant response on planetary vibrations, expressed at the relief of the Crust. Human impact on environmental surrounding, due to intelligent building the resonant buildings, which are integrated into the resonant network, contributing to overall resonant power are increasing the total efficiency of the global resonant landscape network system, due to increasing the overall energy fields intensity. Accordingly to this Holy Knowledge, the human impact on the environmental surrounding have to improve for overall harmony with the Whole Universe, with full respect, to the life in general. Falsified balance between evil and good, between death and life, just like between night and day, which in black and white uniform style of opposed qualities which fight each other, intend to replace an overall harmony, have to be recognized as the trap which is installed with an aim to cause collapse, disasters, death in general, thus have to be removed urgently and efficiently, in order to prevent for total collapse. Afterword, we would be capable to improve the living conditions, to live together unified in one harmonically unity which contributes of numerous life species, capable to live in peace, to support harmony, and overall prosperity, being in doing so supported by the Whole Universe due to resonant power of Love, basic information imprinted within the all-pervasive background energy field, the highest force of Universe.

Disharmony across the planet Earth, originate in presence of numerous, on the first sight different parasitic species of cuckoo behaviors, which all of them are sharing similar properties, along the artificial grafted DNA sequence, among each others, causing the huge damages to the whole system. The parasitic species are cuckoo, giant squids, hornets, and band-worms among at least seven giants and seven dwarf another species, which share together this genomic DNA poisonous sequence, accordingly to the information of our ancestors. Our duty as the keepers of the life and harmony is to out figure the way to remove the causes of disasters, bearing in mind that some people blended with their ambitions, gold and might, are living in symbiotic relationship with

parasites imitating their behaviors, are fighting to keep these species alive.

In spite of these facts, we should be aware of the existence of very simple thus practical applicable methods to efficiently remove the pest globally, all parasitic species at once, preserving in doing so all another life species capable to live in harmony, inclusively the humanity, of total collapse. These methods are described in more details in another books of mine, which you could find listed in Links chapter at the end of this work. All man made buildings, are projected with an aim to contribute to overall harmony due to resonant power, regardless if their are unique, or if there are many objects similar to each other, which contributing to resonant landscape network. Carefully selected locations, orientations, and position within the group of resonant objects, play significant role to the total efficiency of the resonant application. The ancient buildings could be used as the sources of ideas, which could be re-implemented recently in building new or repairing existing objects, due to understanding their resonant aspects. We should bear in mind, that such the resonant relationship toward the world had been very wide spread and implemented very long time across the world, so that many additional information have been kept in numerous traditions worldwide, such like it is the case with the Chinese traditional Feng Shui, which exactly matches the purpose of keeping and improving the harmony of the global resonant landscape network. In spite of the full respect to the traditional treasuries, we should not limit us to any collection of the rules, without to understand the reasons why they should be introduced. Thanks to the modern measurement technology, and understanding the aims of ancient traditions, we could merge them together, in order to easily check the impact of implementation to existing structures. Instead of just keeping the rules, we could use given pool of information as source of inspiration, creating the new unique object as artistic work with full functionality. Simple merging metaphysical and scientific knowledge, to match together without conflicts and friction, we're going to get resonant case with significantly improved, thus magnified results. The information about how to implement this merged knowledge in practice could be found in [Harmony Supporting Applications](#), illustrated on several examples to improve for understanding the main principles which are already implemented in universe, in general.

In this work explained principles represent the base of understanding of the resonant buildings, which all the times have contributed to healing the environmental surrounding space. Once understood properly, in this book explained principals could be implemented to heal the space globally, just due to revealing and repairing particularly damaged already existing resonant global network, for the sake of overall benefits of all leaving beings, thus abundance of life in general. This information should be understood as initiative to initialize an initiative in order to organize the projects, regardless of their size and complexity, which could be supported by international funds, since they are of common interests. On the other hand, there is not known that it is not allowed to build the freshwater spring in our own yards and gardens, to allow for draining the fields, to allow for increased harvest, establishing simple cycling of water in vertical way. In the devastated areas, the reforestation is of huge importance, replanting the different kinds of plants, organized in fractal groups, which are going to spread along the time, and finally to merge together. Forests are of high importance for pulling the underground water closer to the ground surface, since they have deep and wide spread roots, which hold the soil wet and compact, similar to the crowns of the trees, which all together pull the clouds above them in the skies, because of necessary rain, helping to establish in this way the atmospheric water circulation again in this area, and beyond. This would be essential process for spreading rapidly the forests across the devastated landscapes, turning the life back, and increasing the value of the land. Our duty as human beings, independently of specialization, religion, confession, teams membership, own interests and local differences, is to work together to the holy duty of revealing the global resonant network, understanding that local is just one particle of global, pretending to impact the whole in good way, simultaneously achieving our local jobs

aims, so that the whole could respond to us in turn even better as the reflection of our good giving, good intentions, based on love and resonance power, to overall benefits and prosperity, to reach finally peace and harmony, the base of any real prosperity.

May Peace, Love, Harmony, and Light being with you.

Vladimir Mikael
Berlin, 2015

Gratitude

Special thanks to everybody who supported me to finish and publish this work. I'd appreciate if you would have interest to read another works of mine, of them some are also available at Amazon in kindle format, such as [Universal Fractal Model – The Harmony of Universe](#). Even you could get the short book free of charge, buying it would support me to get better score, thus the information is going to be spread even better. This would support me to write furthermore. Thanks for supporting me, and in doing so for contributing additionally in reestablishing the overall harmony. Thousand thanks to everybody who could support me financially, since the need is huge concerning obligations toward my family, in order to could finish my writing job in appropriate time. To do so, you could by the virtual product, or some of eBooks, or even though you could be a member of kindle unlimited program, free of charge one month long and read all this book in eBook format for free, simultaneously supporting author financially, since the far the selected book is red over 10%, the author could cash his crunches of cake, just like the book is soled. Thanks for loving the globe, along with Whole Universe. Peace, Love and Harmony with you.

Some additional information and aspects about [Inmirsul](#), you can get at related link.

God save the Queen!

I love Rocky Rock around the clocky-clock,
around the world and far, far beyond!
